

New Product Introduction

All-New E•Zpro™ Dovetail Jig from General Tools & Instruments Makes Precision Woodworking Easy and Fun

Solid aluminum body and quick adjustment features rival far more expensive jigs

Until now, manufactured dovetail jigs were mainly for professional woodworkers and serious hobbyists due to their size, high cost and complexity. But the all-new **E•Zpro™ DOVEtailer (Model No. 860) Dovetail & Box Joint Jig** <http://generaltools.com/Products/EZ-Pro-Dovetail-Jig_860.aspx> from General Tools & Instruments brings precision joinery capability to anyone who owns a router or router table. Make perfect joints right out of the box. No other parts or equipment are required.

The jig is machined from a solid, heavy-duty aluminum extrusion to ensure years of service. Its unique sliding depth gauge is easily adjusted for routing both full and half-blind joints to the dimensions your work requires. Face-joints or box joints are just as easy to accomplish. Cut both pins and tails for dovetail or box joints in two quick passes with your router or on your router table. Setup is simple and fast, and the **DOVEtailer** is quickly repositioned to make continuous joints of any length using its provided alignment key.

The **DOVEtailer** is so easy to use, even novice woodworkers will be able to rout precise joints with just a few minutes of practice. Tradesmen will welcome the unit's compact size, portability

and uncomplicated features as well. Each **DOVEtailer** kit includes the dovetail jig, alignment key, a 14-degree ¼-in.-shank dovetail router bit and two guide bearings. The complete kit is available at The Home Depot for \$39.97.

The **DOVEtailer** was introduced earlier this month at the annual National Hardware Show held at the Las Vegas Convention Center, in Las Vegas, Nevada.

About General Tools & Instruments Company

Headquartered in New York City for more than 87 years, General Tools is the industry leader in specialty tools and instruments. Its recent acquisition of Mannix Instruments, a manufacturer of high-quality handheld electronic test and measurement equipment, has expanded General's product line to include over 2,000 precision tools and instruments. This vast array of products is widely used by consumers, contractors, woodworkers, hobbyists, electricians, plumbers and professionals in industrial maintenance, HVAC/R installation and inspection, occupational health & safety and home inspection.
