

Create the **Ultimate Dust Extraction System**

Made in the USA

Combine an Oneida Dust Deputy cyclone with the quality and performance of a **Festool CT Dust Extraction System** to create the ultimate three stage vacuum system.

- Now tackle the toughest jobs with ease! Planers, moulders, routers.
- Designed to fit Festool vacuums.

"This product works better than I could have ever imagined."

Leonard Peoples - Florida

"This is the greatest addition to any shop since duct tape."

Ted Robbins - Florida

Vacuum Not Included.

Stage 1 - The debris passes through the Oneida Air Systems Dust Deputy where the cyclonic action separates out 99%+ of the dust and deposits it into the 9 Gal. collection box before it goes to Stage 2.

Stage 2 - The fractional percentage of dust that makes it through the Dust Deputy is then deposited into the Festool collection bag.

Stage 3 - The few particles of dust that escape the bag then pass through the Festool's HEPA filters where 99.97% of particles .3 microns and larger are trapped, leaving the escaping air ultra-clean.

The Original
Dust Deputy

Retrofits to Any Shop Vacuum!

Dust Collection Since 1993
