Start Your Dream Job: Contest Helps Small Businesses Grow
At-home companies can scale production with an Inventables X-Carve

In this new era of manufacturing, people start businesses in their garages, basements, and workshops. The accessibility of digital tools and small-scale machinery makes it easier than ever to produce physical products at home instead of traditional factories.

Inventables wants to help new and existing businesses scale at-home product manufacturing. From now until March 31, 2018, Inventables is hosting a video contest for businesses to win a new X-Carve 3D carving machine and an annual membership to their business-focused software, Easel Pro.

The X-Carve is a 3D carving machine that carves wood, plastics, soft metals, and a variety of other materials. Businesses have used the X-Carve to make guitars, custom signs, home decor items, modular furniture, and a variety of other products. Anyone can start designing and creating projects in Easel, Inventables' free web-based software.

"More than half of X-Carve owners use their machine to make money," said Zach Kaplan, Inventables' Founder and CEO. "This contest empowers business owners who have hustle and ambition to grow. Using an X-Carve can help them bring their business to the next level."

Don't want to enter the contest? Inventables offers monthly payment plans for the X-Carve so business owners can pay off their machine in increments as they sell products. The X-Carve starts at \$999 or \$84/month with 0% APR from Affirm. Users can use their web-based Easel software for free, even before owning a machine. Upgrading to an annual Easel Pro software membership costs \$155.88.

The contest runs from February 1, 2018 until midnight CDT on March 31, 2018. For more information, visit the Inventables website at inventables.com or read the contest rules at <https://www.inventables.com/projects/contest-win-an-x-carve-for-your-business>.

About Inventables

Inventables' digital manufacturing products enable anyone to launch or grow a business. Easel, their free web-based software, works seamlessly with their Carvey and X-Carve 3D carving machines. Combined with Inventables' membership-based business software, Easel Pro, their 3D carving ecosystem is simple enough for beginners to start small and powerful enough for independent manufacturers to start new ventures.
