

FOR IMMEDIATE RELEASE

Easy Belt Changes, Accurate Speed Adjustments and Ample Capacity Are Hallmarks of New DELTA® 18-Inch Laser Drill Press

JACKSON, Tenn. (June 16, 2010) – DELTA Machinery introduces the new 18-inch Laser Drill Press (model 18-900L), raising the bar in the drill press category with features that include the patent-pending Auto-Tensioning Belt Drive System, a full 6-inch quill stroke and an oversized woodworker's table.

“Our most advanced drill press to date, the DELTA 18-900L encompasses a total package of features technologically designed to meet and exceed the demands of today’s woodworker, including the need for capacity, accuracy and ease of use,” said Bill Harman, DELTA product manager. “With a combination of our patent-pending belt drive system and the deepest quill stroke and largest table on the market, woodworkers can have the finest drilling and boring machine DELTA has ever made.”

The patent-pending Auto-Tensioning Belt Drive System, an industry first, allows for fast and easy speed changes while maximizing efficiency with consistent belt tension and motor alignment. A simple chart located inside the hood shows bit speeds for each of the 16 possible belt configurations. Furniture makers, architectural woodworkers, toy makers and machinists alike will find added versatility with a full 6-inch quill stroke that will allow them to drill or mortise through 6-inch by 6-inch lumber. A patented oversized woodworker’s table provides users with an ideal material support surface for larger material. The table bevels up to 90 degrees

--MORE--

left and right and tilts forward up to 48 degrees to give the woodworker the ability to drill compound angles. The table also features t-slots for clamping and a removable center insert for through-table drilling and sanding.

Accuracy is achieved with micro-adjustable depth stops and an independent depth scale, allowing woodworkers to zero the scale and set up for repetitive drilling in a quick and easy manner. A fully adjustable TWINLASER® projects a bright red crosshair on the work surface that can be easily fine-tuned and indicates the center point of the bit regardless of table position or thickness of material. The 18-900L also features a heavy-duty $\frac{3}{4}$ HP motor that provides power for the most demanding drilling applications. In addition, the unit comes equipped with an LED light with bendable shaft for excellent lighting and positioning, as well as a large non-tip base for stability.

A BIESEMEYER® fence (model 18-901) is available as an accessory for the drill press to ensure accuracy and repeatability of drilling holes. This high and low profile fence provides the versatility to support tall and thin materials and a quick-adjusting material flip stop offers lateral support of the work piece.

The new DELTA 18-900L 18-inch Laser Drill Press is backed by a five-year warranty and is available now at specialty woodworking dealers for a suggested retail price of \$829.

About DELTA | PORTER-CABLE

With a combined 195 years of woodworking expertise, [DELTA | PORTER-CABLE](#) designs and manufactures a robust line-up of portable, stationary and benchtop woodworking power tools, equipment and related accessories for professional woodworkers. The brand has a history of industry-changing innovation, introducing many of the world's first power tools, including the helical drive circular saw, hand-held belt sander, motorized miter saw, portable belt sander, and 10-inch tilting arbor saw.
